Debate: post-Fukushima in France

EUSEW, Brussels – 14/04/2011
Meike Fink – Climat Action Network France
Nuclear energy in France

• 58 nuclear power plants providing 78% of the electricity production

• 2 new plants under construction (Flamanville and Penly) and several international projects (one in India in the seismic zone of Jaitapur)

• February 2011 the government announces the construction project for a new reactor type - Atmea – with a medium power capacity (1100 MW)
Quotes

• Nicolas Sarkozy (April 5): «There is no alternative energy source that could replace nuclear energy – if you want a nuclear phase out you have to explain to the French population to get light and heating power from candles.»

• François Fillon (March 18): « Renewable energies are only “additional” energies – the idea that we could do without nuclear energy is non-sense. »
2012 – presidential election

• Program of the Socialist Party – adopted April 9th: “In order to reduce our dependency on nuclear energy and oil we develop energy savings and renewable energies whose growing industry has been destabilised by the governing party”

→ Lack of ambition: No number, no schedule, disappearance of the idea of a moratorium on the 2 plants under construction
Overview on French national public debates on energy

• National energy debate (2003 / 2004)
  – NGOs did not participate in the debate

• National debates on nuclear energy (2005)
  – Again some of the NGOs left the discussion

• Grenelle de l’environnement (2007):
  – Nuclear energy was ex ante excluded from the roundtable discussions

• 2011 ?
